Eric Alexander put 2-12" GP's in the van yesterday and busted a 153.1 on the first burp and a few seconds later a 155.1 on the second burp in MECA. The van only gains .7-1db with the mic in the kick. Funny thing is, he strapped 2-GX3000's per GP12. LOL These subs are rated at 600wrms and 1200 peak. He measured 2100watts per sub one click down from his burp volume. 🤖🤖 Pretty impressive little subs. 😊
